

ALGAE TO FUTURE

A2F's vision is to lay the foundation for industrial microalgae production in Norway, utilizing natural resources and waste streams from existing production lines within agriculture, aquaculture and process industry.

introduction

In Algae to Futures visual profile we introduce how the research project should be presented in practice on web and print. A2Fs visual profile is made as an exam project by master student, Veronika M. Jakobsson.

In addition to this profile I've fixed the logo that was already made, into correct colors and for different uses, photofiler, and examples for how the website and Facebook page could look. The animated figures on Facebook are not my work, but they are going to be used in an animation made by someone else for this project.

When making this visual profile I always had in mind to have an organic and moving design. Wanted the visuals to float like algae do in water. Keeping the futuristic touch in the logo to let it reflect on the modern thinking method behind this project.
Algae is the future.

logo

The logo is based on the algae “Tetraselmis chuii” and the photosynthesis. Algae to future has one main logo and two secondary logo. If there is no room for the mail logo, the two secondary logos should be used. The logos comes in files formatted for print, web and smaller areas.

Clear space helps the logo make an visual impact where its placed at any time. Elements should never be placed inside these security lines wich is the size of half of the brand mark.

colors

Green, grey green and blue green are Algae 2 Futures main colors. These are used in the logo and elements. Algae are single microorganisms.

Photosynthesis gives the algae a clear green color. Photosynthesis is based on the fundamental biological processes that create life. All the colors of the A2F project are complementary colors that express this.

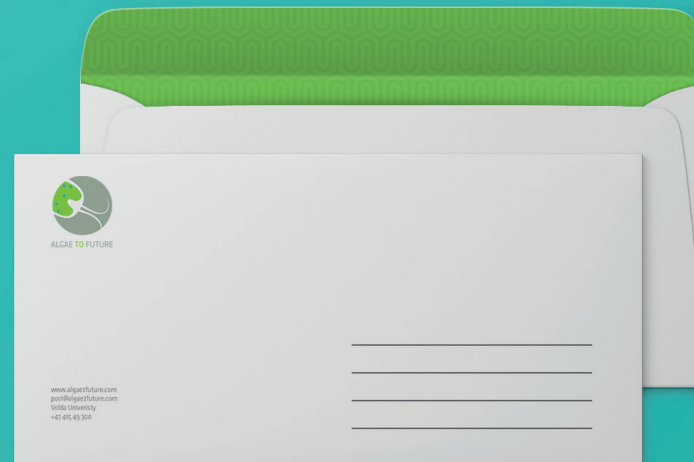

CMYK: 60/0/100/0
RGB: 117/184/41
Hex: #75b728
Pantone: 376 U

RGB: 0/156/153
Hex: #09b99
Pantone: 3272 U

fonts

The font that is used in the logo is also used in headlines for different publications and is called Coli Condensed.

For places with a lot of text the font Minion Pro should be used. This is a classic and light readed font that is suitable for a big amount of text.

web fonts

For web we use the font Roboto which is a Google font, that makes it work in all browsers. It has a good readability and is available in different weights. We also use Clio Condensed for headlines etc.

background

There are two background Algae to Future uses. There are two different gradient masks to choose from. Either green and blue green or blue green and green. The filter comes in a zipped file.

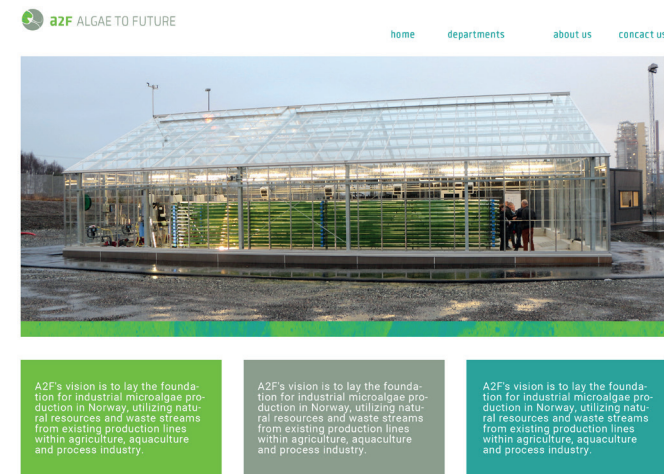

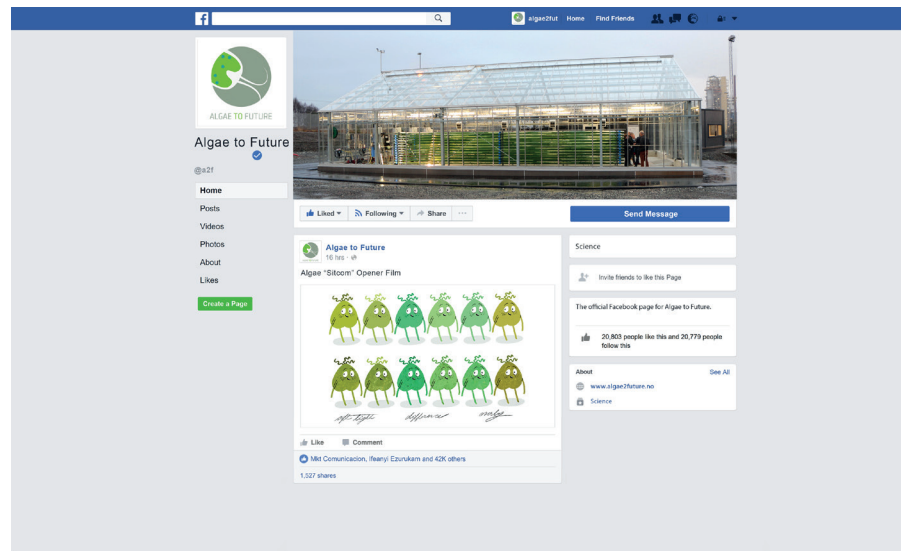

example identity in use

The color palette should always be used. Pictures and movies is to prefer on social media, because it catches the attention of the users, and the more heavy reading should be on the website.
